BravoLT

Senior Business Intelligence Developer – PL/SQL, C#

Bravo LT needs you to be a part of our highly motivated group of technology experts. We share a passion for technology and the community we serve, and we are committed to building long-lasting, productive relationships. We focus on giving back to the community, positively impacting society, and providing quality solutions that work. Our mission is to empower others through compassion, professionalism, and the power of technology.

The senior software engineer will work with an existing team to develop, upgrade, troubleshoot, maintain, analyze, automate, secure, and recommend database solutions. They will perform, coordinate, and troubleshoot code deployments/outage response; develop and document internal procedures, configurations, end-user documentation, informational presentations, and best practices.

Responsibilities

- Under minimal supervision, designs, codes or configures, tests, debugs, deploys, and maintains programs using a variety of software development toolkits, programming languages, testing/verification applications and other tools, while adhering to specific development best practices and quality standards
- Advise and mentor intermediate and junior engineers on best practices
- Performance tuning and identification of bottlenecks
- Designs, develops, and troubleshoots business intelligence and data warehouse applications and packages using PL/SQL and C#
- Gather business requirements/user stories, translating that information into detailed technical specifications from which programs will be written or configured, and validating that the proposed applications align with both the architectural design and the business needs
- Participate in process leadership for work groups, and product/service delivery strategy and work plans

Other Responsibilities

- Deep troubleshooting and issue analysis, as well as coding, testing, and implementing software enhancements and/or applying patches
- Competent to work on most phases of applications systems analysis and programming activities, but requires instruction and guidance in others
- Provides coaching to less experienced engineers

Qualifications

- Experience with developing in PL/SQL and C#
- Strong Oracle application development skills using PL/SQL
- General knowledge of ETL, including writing/modifying SQL, and troubleshooting issues
- Experience using Informatica for the development and testing for data integrations
- Strong written and oral skills, time management, balancing multiple priorities, and being able to take a self-structured approach with minimal direct supervision
- Bachelor's degree in computer science or similar field
